

System Manager and Security

This module provides all the power and flexibility you need to ensure a strict control over your financial data by assigning specific rights to users. For example, determine which users can access the item, customer or employee files, or modify discounts, price levels, payment terms, Sales Rep commissions, etc. You can also customize windows and menus according to each user rights and restrictions.

Not only does this module ensure tailor-made working environments, it also provides a set of comprehensive utility programs.

FEATURES AT A GLANCE

- Integrates the power of .NET technologies
- Gives you access to online services (exchange rates, road maps, package tracking)
- Provides a reliable backup utility with advanced security options
- Provides a data integrity checker
- Provides a spell check
- All transactions are posted in real-time
- Keeps a complete history of all transactions
- Allows an unlimited number of companies
- The powerful drilldown feature lets you go deeper into transaction detail, whether the fiscal year is closed or not

SECURITY

- The user maintenance allows you to limit access to specific features and data
- Lets you group users for better user management
- Each new record provides a date of creation, or modification, and the user identification
- An audit trail report provides information about which transactions are modified, what the modifications are and who made them

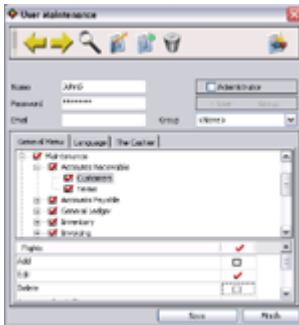

SEARCH

- Customizable grid according to each screen or user
Lets you use any field from a window as a search criterion

REPORTS AVAILABLE

- Filter all reports to display only the information you want
- Export your data in various formats (.xls, .pdf, .html, .rtf)
- A form editor lets you modify the report layout
- Use any field from a report as a search criterion

SCREENSHOTS

User Maintenance

This maintenance allows you to define which modules are accessible to each user, and what types of action users are allowed to perform: add, modify, delete, view only, etc.

Audit trail

An audit trail keeps track and provides valuable information about all modifications made to your transactions.
